Pharmacokinetics can be simply described as the study of 'what the body does to the drug' and includes:

- the rate and extent to which drugs are absorbed into the body and distributed to the body tissues.
- the rate and pathways by which drugs are eliminated from the body by metabolism and excretion.
- the relationship between time and plasma drug concentration.

Pharmacodynamics governs the concentration-effect part of the interaction, whereas pharmacokinetics deals with the dose-concentration part (Holford & Sheiner, 1981). The pharmacokinetic processes of absorption, distribution, and elimination determine how rapidly and for how long the drug will appear at the target organ.
