The largest-capacity FLNG vessel built to date is Prelude at 3.6 metric MMtpy. Globally, the average size of an onshore liquefaction facility is 8 metric MMtpy. To compete with onshore liquefaction, FLNG projects must add another vessel to a development. Each vessel requires its own storage and offloading facilities.

### Floating LNG market overview: Has FLNG crested the wave?

Prelude's hull is 488 metres long (1,600 feet). Despite its large proportions, the floating liquefied natural gas facility will take up just a quarter of the footprint of an equivalent land-based LNG plant. She is designed to remain at sea for around 25 years in severe weather conditions and even withstand a category five cyclone.
